

control statements

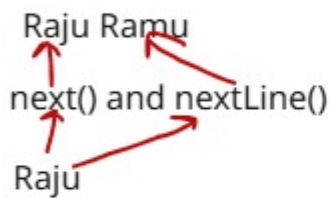

- 1) if statement
- 2) if else statement
- 3) if elseif else statement ==> multiple conditions

's' ==> character

"s" ==> string

In java, we can write the code to collect the input scanner class, java can collect the input if its a number with decimal OR without decimal, collect a boolean, a string ==> next()

Raju Ramu
next() and nextLine()
Raju

10 == 20

"Raju" == "Ramu"

~~==~~

equals()

"Raju".equals("Ramu")

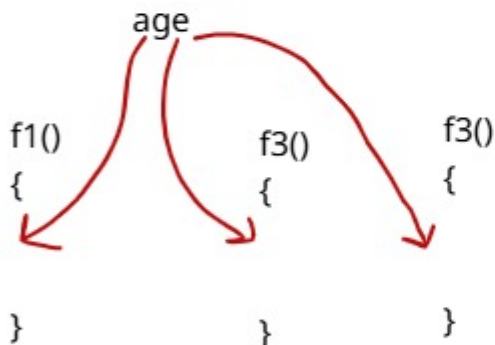

```
int demo()  
{  
----  
----  
----  
}          demo()  
          demo()
```

Function ==> Methods

```
System.out.println("Enter your name:");  
String name = new Scanner(System.in).nextLine();  
  
System.out.println("Enter the age:");  
int age = new Scanner(System.in).nextInt();  
  
System.out.println("Enter the mobile no:");  
int mobileNumber = new Scanner(System.in).nextInt();  
  
System.out.println("Enter the city:");  
String city = new Scanner(System.in).nextLine();  
  
System.out.println(name);  
System.out.println(age);  
System.out.println(mobileNumber);  
System.out.println(city);
```

age

f1() { } f3() { } f3() { }

Fan ==> switch

TV ==> remote

BankAccount ba = new BankAccount();
