

loops

If we want to run same code again and again multiple times we use loops concept

1) for loop ==> if we know how many times we should run the code again and again we choose for loop

2) while loop ==> if we don't know how many times we should run the code again and again we choose while loop

class Student

```
{  
    String name;  
    int age;  
    String city;  
}
```

1st student ==> name, age, city
2nd student ==> name, age, city .
.....

create 4 students

1st ==> Raju, 12, Mumbai

2nd ==> Tim, 11, Delhi

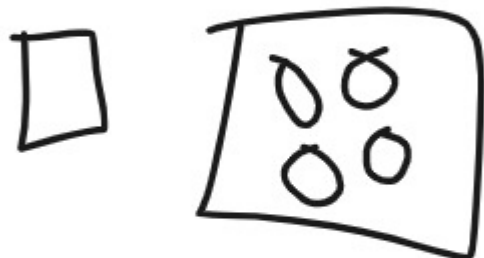

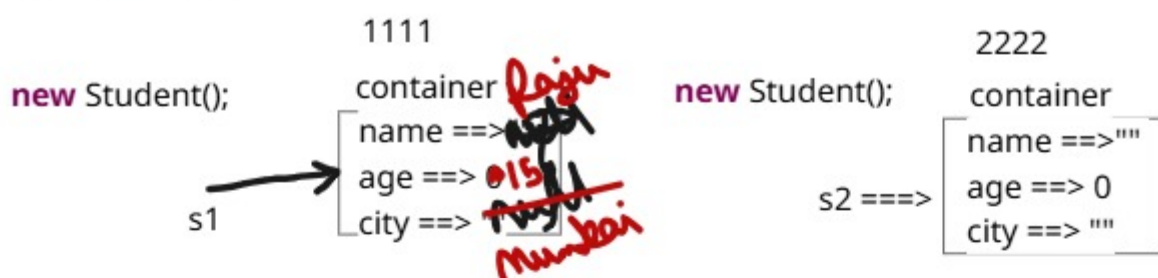

3rd ==> Cook, 12, Pune

4th ==> Sam, 13, Chennai

12 details

i want to create 4 students

each student wants names, age, city coming from Student class

container ==> OBJECT

Write a java code to store the details of 5 employees using the concept of class and objects where each employee has name, age, jobRole, company and salary and print those details

class Food

```
{  
    String name;  
    int cost;  
    String popularity;  
}
```

Food f1 = **new** Food();

Food f2 = **new** Food();

Food f3 = **new** Food();

f1.name = "Idly";

f1.cost = 30;

f1.popularity = "Very Popular";
